How to protect our skin from air pollution?

Nowadays, people living in big cities face the problem of air pollution. The World Air Quality Index has reported unhealthy levels of pollution in many cities including Bangkok. It is highly recommended to use a facemask and avoid outdoor activities.

Pollutants usually include PM2.5, PM10, Carbon monoxide, Sulphur dioxide, Nitrogen dioxide and Ground-level ozone. They not only affect the human breathing system, but also are harmful to the skin. Several studies have revealed the effects of pollution on the skin: accelerated skin aging, excess sebum secretion, uneven skin tone and inflammation.

Anti-pollution cosmetics and ingredients are getting more popular on the market. They work by reducing the skin permeation. Pollutants, when getting into the skin, create free radicals that damage the DNA, collagen and elastin, therefore leaving a wrinkled and unhealthy skin. As a result, antioxidants and anti-inflammatory ingredients are the popular ingredients used by many brands in skincare products for getting the anti-pollution concept.

Regulations

Thai FDA Guideline for cosmetic advertisement: Contour cream, Anti-cellulite, Firming, Anti-acne and Anti-comedone products

Contour cream, Anti-cellulite and Firming products:

1. A statement or picture conveying the efficacy of changing body system or structure such as increasing burning/reducing fat accumulation, increasing blood flow, reducing waist size and increasing/reducing breast size, etc. are prohibited.
2. An advertisement must convey the objective to help improve skin condition such as helping facial or body skin to be naturally firmed in accordance with individual natural structure.

Anti-acne and Anti-comedone products:

A statement or picture conveying the efficacy of acne treatment or reducing inflammation of acne are prohibited.
