

Did you know?

Sub-Zero Waste Trend in Global Beauty Products

Nowadays, a huge plastic garbage enters the oceans, polluting the seas, littering the beaches and endangering ocean life. Most of plastic pollution was plastic water bottles, beauty products packaging and microplastic from scrub products. Right now, many consumers are aware about the environment impact of single-use plastic, they expect brands to take responsibility for their waste and facilitate packaging recycle for consumers.

According to Mintel report, "Sub-zero waste is not just a trend; it is a movement towards a ground-shaking new archetype for the beauty and personal care industry whether reducing or eliminating waste altogether. If brands don't change their approach now, they won't exist in the future." Now many beauty brands are making efforts to launch initiative products with minimal, recycled or recyclable packaging and refillable compacts or bottles in order to reduce the waste. It also has reinvention of product format and

or recyclable packaging and refillable compacts or bottles in order to reduce the waste. It also has reinvention of product format and packaging to be more reusable than disposal. Examples of new format product are Lush shampoo bar and conditioner bar which are the zero-packaged products as well. Procter & Gamble has launched Head & Shoulder shampoo, its bottle uses 25% recycled plastic made from beach plastic. Unilever and L'Oréal, both have pledged to use 100% recyclable, reusable and compostable plastic by 2025. Plastic bottles can also be replaced with other materials such as paper, aluminum or glass that are recyclable.

Consumers pay more attention to the impact on the earth and climate change. As a result, beauty and personal care industries have to purpose the products as well as all processes in the supply chain that won't end up being more toxic to the environment in a long term for a true zero waste mentality.
