De-stressing Skincare

Date Event/Website

The new way of life causes our behavior change, we are reducing meeting activities and doing more work from home. These make not only physical and mental stresses, but also skin stress. Our body releases Cortisol hormone that causes excess sebum production from Sebaceous glands, resulting in clogged pores, inflammation, acnes and dull skin. Using skin care products is one of the ways to solve those problems while helping to maintain skin balance. As aforementioned, skin care products can reduce the effects of stress on the skin and make the skin look plump and healthy.

There are 4 tips to choose skin care products which help reduce stress on the skin.

1. Use gentle and restorative products containing antioxidants, vitamins and ceramides to make skin balanced
2. Use skin care products with aromatherapy or essential oils such as lavender and chamomile
3. Relieve stress using facial mask that contains soothing and calming ingredients such as centella and allantoin
4. Strengthen the skin's protective barrier, increase radiance and reduce the loss of skin balance by using moisturizer
